## **DETAILED ACTION**

### ***Response to Arguments***

1. Upon further analysis of claims 1 and 10, Shake extends the waveform in the time axis but a pulse is necessarily broadened if the frequency domain because additional harmonics are captured if the frequency domain. Therefore, the reference anticipates the invention.

### ***Allowable Subject Matter***

2. Claims 2-9 and 11-14 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim(s) 1 and 10 is/are rejected under 35 U.S.C. 102(e) as being anticipated by Shake et al. US 6587242 B1 (Shake).

Art Unit: 2638

Re claims 1, and 10, Shake disclosed,

An optical pulse addition device for demultiplexing/multiplexing a plurality of time-division multiplexed optical signals in terms of time without converting the optical signals into a plurality of electrical signals, comprising: a chirp unit generating a frequency chirp in an inputted optical signal composed of a plurality of optical pulses and extending a spectrum of the optical pulse (13 of Figure 1); a transmission unit transmitting a part of the extended spectrum through a band around a prescribed wavelength (12 of Figure 1); and an addition unit adding an optical pulse corresponding to the transmitted band to a time-division multiplexed optical signal with the prescribed wavelength (14 of Figure 1).
